

Holden Perkins

### Invention/Science

The Renaissance as well as humanism was all about human accomplishments and advancement. When you think of human accomplishments isn't one of your first thoughts the car? Indeed the automobile was a huge innovation that an inventor like Da Vinci would've been proud of!

### Literature

This book (or books really) is an extensive writing that has tons of character development and details of the character's emotions and activities. This is one of the results of the legacy of the Renaissance and Humanism.

## Architecture

The Eiffel Tower is one of the most staggering architectural achievements that I can think of. It is also a great example of what the Renaissance and the movement of Humanism left behind. You can see this through the symmetry and use of geometry in the structure.

## Art

This flower painting is painted with the third spatial dimension in mind; it has depth. The Renaissance is famous for starting to introduce perspective into art. It is also a good example of the legacy of humanism because humanism is human's gradual interest into their own, natural affairs. This is just a painting of a plant, it is natural with no obvious association with any supernatural involvement or involvement in myths.

## Inventions

Again, when you think of the great accomplishments of humans, don't you think of the machine that took us into the sky? Yes, the airplane is a great example of what the Renaissance and movement of Humanism left behind. It is a good example of the legacy of Humanism because it's an invention made by humans just to make their life easier. Leonardo even had an Idea of a flying machine.
